MY RESEARCH

My research focuses on past sea-level changes and past climates, and their significance as analogues for the future of our planet. I have a parallel interest in modern coastal environments, where I investigate coastal erosion, extreme wave events, interactions between ecological and geological processes and trajectories of coastlines and nearshore environments under changing climates and sea levels.

Below are shown some infographics on my research outputs (manuscripts and datasets). The full list of outputs is listed at the end of the CV.
